***Percent Employed	100%	100%	88%	100%	86%

\*Student surveys are sent out by the Office of Institutional Research and Effectiveness (OIRE) in the year following graduation to capture employment information 6-12 months post-graduation

\*\* Results to the university-wide alumni survey are normally analyzed and reported annually, but due to the change in university reporting requirements, only those who graduated in May 2015 are included in this report.

\*\*\*Expected Level of Achievement (ELA) 70% of graduates will be employed within the field of nursing within one year of graduation.

The University of Saint Francis sends the 'Alumni Career Path' survey to all graduates six to twelve months after graduation. Based on those responding to the survey, information is collected regarding **graduate employment**. Due to low survey response rates from graduates the nursing department also attempts to verify employment directly with graduates.
